

TeleSlide

Server application for the sharing of multimedia documents

TRIBVN has developed a **server application for the sharing of multimedia medical image documents within working groups**: TeleSlide. Today, three spaces are available for the conduct of these activities:

- ✓ **My Files**: space for the creation and storage of multimedia files
- ✓ **Workshops**: space for exchanges based upon the publication and sharing of multimedia files
- ✓ **Protocols**: space for the sharing of documents for the conduct of secure reviews for protocol purposes

TeleSlide is available in an **On-line version**, as a mutualized application on a TRIBVN server (www.teleslide.com), or in a **Multimedia version**, installed on your own server for your personal use.

- ✓ Utilization: Sharing of multimedia medical image documents on the Internet
- ✓ Applications: Protocols, education, collaborative work, ongoing medical training, conferences
- ✓ Potential customers: Academic societies, organizers of protocols and quality control, universities, industrial operators

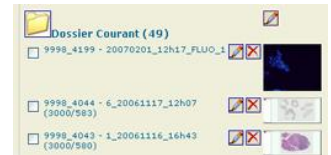

TeleSlide

Server application for the sharing of multimedia documents

✓ Principle of operation

My files

This **tool for the creation and management of multimedia documents** allows each member to manage their personal document space. Objects managed are as follows: JPG images, WFML digital slides, MP3 sound files, MPG films, MS Office and PDF documents. Once created, a document may be controlled, stored in a directory and published in a **Workshop** for sharing within a user group.

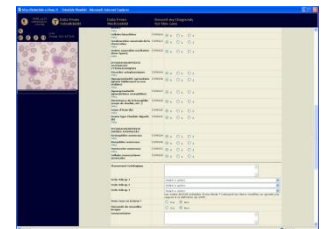

Workshops
Protocols

A **workshop is a regulated space for the sharing of multimedia documents between members**. Workshop managers will define workshop rules governing the following: conditions of access (unrestricted, private, free, fee-paying, etc.), type (publication, forum, educational, voting), moderation, etc. All the publications in a workshop will be accessible to its members.

Protocols are workshops for the organization and collection of the opinions of a number of members on a given case, involving one or more multimedia documents and the comparison of opinions. Cases are generally randomized.

Administration

Parameter setting, personalization and administration functions will contribute to the creation of a collaborative space which fulfils your requirements: profile administration, selection of options for forum management, invitation, combination of workshops within a single entity (suitable for academic societies), style and working language, consultation of statistics, recovery of data entry forms.

Searches

Indexing of documents by means of descriptive files and the TeleSlide **"Search"** function will allow document searches to be conducted within a Workshop or within the user's personal space.

In this way, hundreds of multimedia documents can be accessed.

TeleSlide

Server application for the sharing of multimedia documents

✓ Uses of the TeleSlide application

TeleSlide is a Web application for the following:

- **The on-line publication and hosting** of structured multimedia documents containing medical images
- Operations in conjunction with TRIBVN ICS and ICS Framework workstations
- The **sharing of documents hosted within working groups**
- The **collection of text and image information** in association with collaborative applications

Examples of TeleSlide Online operational projects:

- **Hosting and distribution of image content for academic societies (conferences, ongoing medical training, post-graduate education)**
- **Protocols for the review of haematology slides**
- **Intra- and inter-observer variability analysis of a rare pathology (Adrenal INCA)**
- **Protocol for the review of pathology slides (Paediatrics)**

Examples of TeleSlide Multimedia operational projects:

- **Hosting of guided learning functions (Faculties of medicine/pharmacy)**
- **Education and knowledge validation (MCQ, cases) in education (University)**

✓ Strong points of the market positioning of TRIBVN

- The only server to provide **collaborative working tools to all its members** = a genuine exchange
- A **mutualized platform on teleslide.com** = sharing of resources and costs
- A **private platform on your own server** = independence and autonomy
- A single database for the management of mutual requests = **access to information**
- **Enhanced parameter setting and personalization functions** = adaptation to your requirements
- Support for your project = **responsiveness to your approaches**
